Electrical Safety Inspection Checklist

Use this checklist to identify potential electrical safety issues in your home or business. For a full professional inspection, contact a licensed electrician.

- Switchboard is modern and in good condition
- Safety switches (RCDs) are installed and tested
- No signs of burning, overheating, or damage
- All power points are secure and undamaged
- Light switches operate correctly
- No exposed or damaged wiring
- No frequent tripping of circuits
- Appliances are functioning safely
- Electrical load is suitable for current usage
- Outdoor electrical components are weather-safe
- No flickering lights or power fluctuations
- Smoke alarms are installed and working
- Extension cords are not overloaded
- No DIY or non-compliant electrical work detected
